

Setting up a project

1. Open Adobe Premiere Pro CC 2015
2. At the Welcome screen, select “Project” under “New”

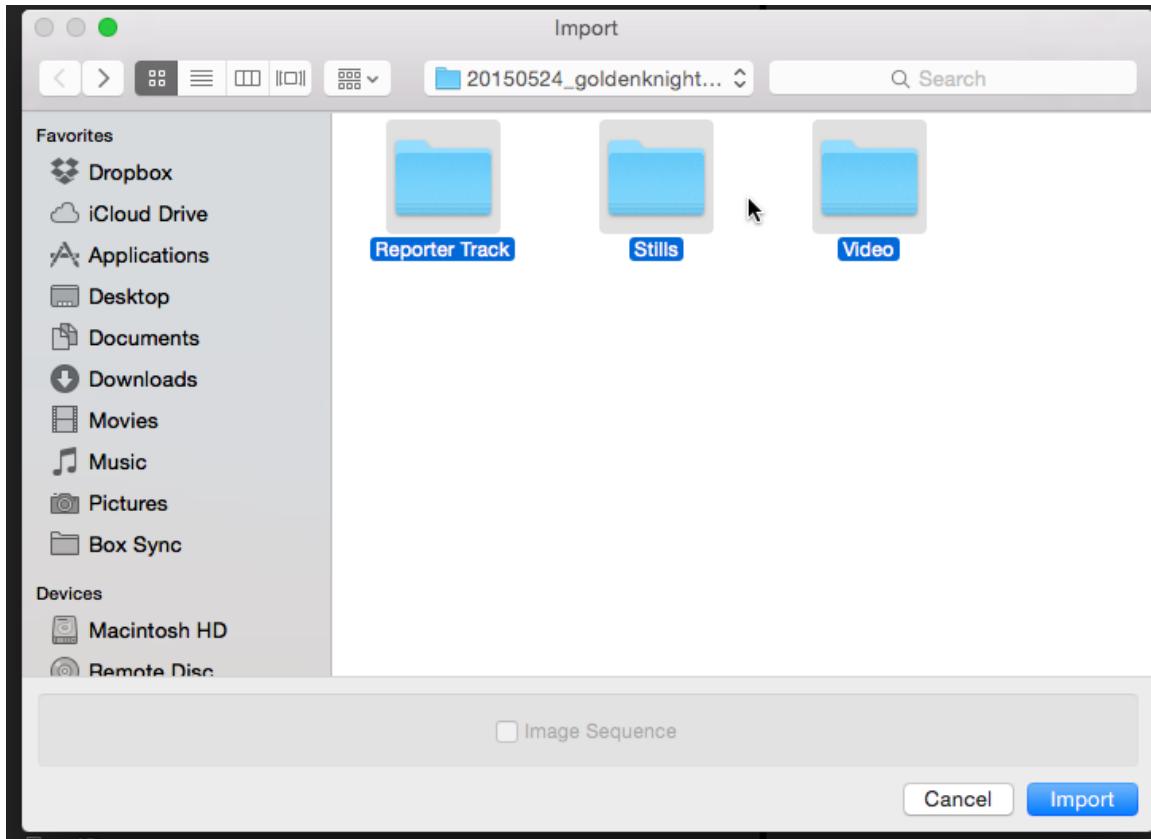

3. Under the New Dialog box, name your file. Navigate to your folder on the EVO server.

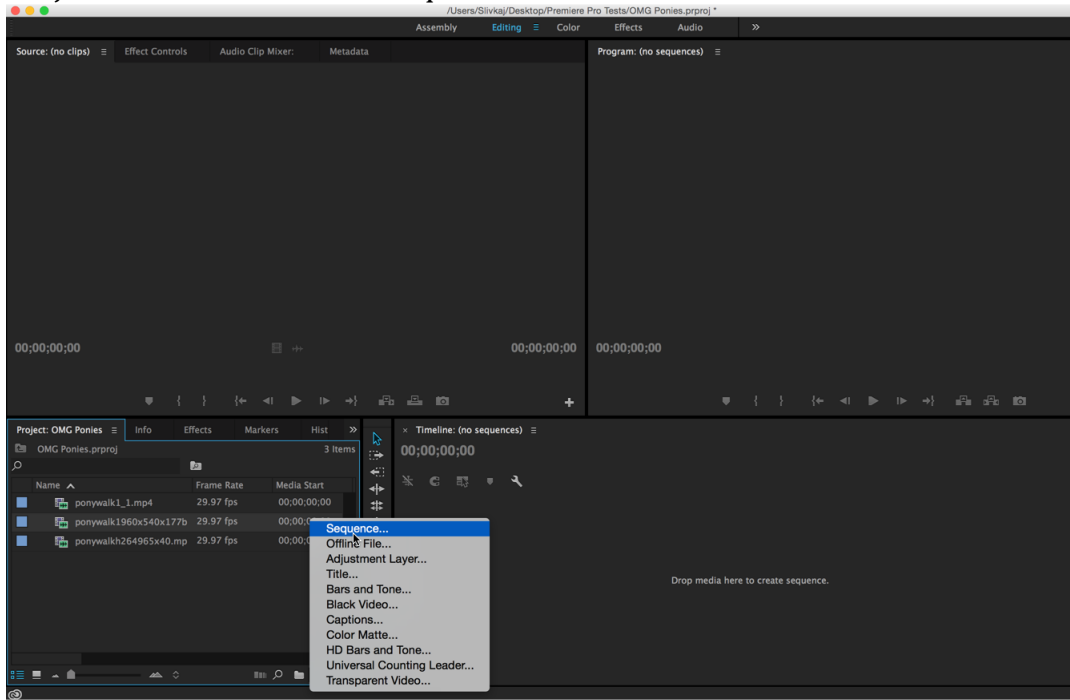

4. Once you've opened the project, go to File, then Import

5. Select the content that you want to import. Click Import. (NOTE: We recommend that you have your media assets already split up into a video folder, a still photos photo and a reporter track folder. This way, Premiere Pro will import each folder as a bin, keeping you more organized).

6. To create a new sequence, select the “New Item” menu at the bottom of the Project window and select “Sequence.”

7. To import the sequence properly, make sure you select Digital SLR → 1080p → DSLR 1080p30, then hit OK.
